

Table of Contents

To the Student.....	xxiv
Chapter 1. Periodic Table and Trends.....	1
1.1 Periodic table	1
1.2 Periodic trends	5
1.2.1 The periodic table in organic chemistry	5
1.2.2 Electronegativity	5
1.2.3 Atomic Size.....	8
1.3 Problems	10
Chapter 2. Bonding and Structure	11
2.1 Electron waves	11
2.2 Atomic orbitals	12
2.3 Hybrid orbitals.....	14
What are they?.....	14
Their shapes	14
The unhybridized p orbitals.....	15
2.3.2 What is the hybridization of an atom?.....	15
2.3.3 Hybridization of atoms in some common bonding patterns	18
2.4 Molecular orbitals	19
2.4.1 Sigma and Pi Bonds	19
2.4.2 Alkane bonding	19
2.4.3 Alkene bonding	21
2.4.4 Pi bonds.....	21
2.4.5 Alkyne bonding	22
2.5 Lewis Structures	23
2.6 Formal charges	27
2.7 Drawing compounds.....	29
2.7.1 Condensed Structural Formula	29
2.7.2 Line Angle Formula.....	32
2.8 Geometry	36
2.9 Dipole Moment	38
2.10 Solubility	39
2.11 Intermolecular forces	39
2.11.1 Dipole-Dipole interaction.....	40
2.11.2 Hydrogen Bonding.....	40
2.11.3 London Dispersion Forces	41
2.12 Types of organic compounds	43
2.12.1 The Hydrocarbons	43
Alkanes	44
Cycloalkanes.....	44
Alkyl groups.....	44
Alkenes	45
Cis/Trans.....	46
Alkynes	47
Aromatic Compounds.....	47
2.12.2 Oxygen-containing compounds	48
Single bonds to oxygen	48
Carbonyl compounds	49

2.12.3 Nitrogen-containing compounds	50
2.12.4 Sulfur-containing compounds	51
2.13 Functional Group Study Cards	53
2.14 Problems	57
Chapter 3. Mass Spectrometry & Infrared Spectroscopy	63
3.1 Mass Spectrometry	63
3.1.1 How it works	63
3.1.2 Fragments	64
3.1.3 The Mass Spectrum	64
3.1.4 Isotopes	65
Bromine	65
Chlorine	66
Iodine	67
Sulfur	67
Nitrogen	68
3.1.5 M+1 peaks	69
3.1.6 Degrees of Unsaturation	69
3.2 Infrared Spectroscopy	70
3.2.1 Nature of light	70
3.2.2 Springs	71
3.2.3 Infrared light (IR)	71
3.2.4 Fingerprint region	72
3.2.5 Identifying IR Peaks	72
Alkanes, Alkenes, Alkynes	74
IR active/IR inactive	76
OH, NH, NH ₂	78
Carbonyl compounds	80
Other functional groups	85
3.3 Problems	91
Chapter 4. Resonance	94
4.1 Introduction	94
4.2 Half steps or full steps	96
4.3 Resonance rules	98
4.3.1 Pi electrons towards cations	98
4.3.2 Pi electrons towards electronegative atoms	103
4.3.3 Lone pairs moving towards pi bonds.	105
4.4 Problems	110
Chapter 5. Acids and Bases	112
5.1 Introduction	112
5.2 Acid Strength	113
5.2.1 Rule 1. Look at the atom that has the negative charge.	114
5.2.2 Rule 2. Can it be stabilized with resonance?	117
5.2.3 Rule 3. Does the inductive effect help or hurt it?	119
5.2.4 Rule 4. What type of orbital is the lone pair of electrons in?	123
5.3 Which is the better base?	125
5.4 In the lab	126
5.5 Problems	128
Chapter 6. Alkanes	130

6.1 Introduction	130
6.2 Nomenclature (Naming Compounds)	131
6.2.1 Common names	131
6.2.2 IUPAC names for alkanes	131
6.2.3 Nuances	134
6.3 Structural Isomers	136
6.4 Conformations	137
6.4.1 Newman Projections	137
6.4.2 Rotation of sigma bonds	138
6.5 Cycloalkanes	141
6.5.2 Bicycloalkanes	142
6.5.3 Stability of cycloalkanes	143
6.6 Cyclohexane Chair	144
6.6.2 Monosubstituted chair	147
6.6.3 Disubstituted chairs	148
6.7 Problems	151
Chapter 7. Stereochemistry	154
7.1 Introduction	154
7.2 Chirality - handedness	154
7.3 R and S Nomenclature	158
Group 4 in the back	160
Group 4 in the front	160
Group 4 to the side	161
7.4 Fischer Projections	162
7.4.2 (R) and (S) in Fischer Projections	164
7.4.3 Compounds with 2 or more stereocenters	165
7.4.4 Other examples of diastereomers	166
7.4.5 Meso Compounds	167
7.5 Types of isomers	168
7.6 Optical Activity	169
7.6.1 Plane Polarized Light	169
7.6.2 Polarimeter	169
7.6.3 Why does an enantiomer rotate plane-polarized light?	170
7.6.4 Specific Rotation	170
7.6.5 Racemic mixture	171
7.6.6 Enantiomeric Excess	172
7.6.7 How can we experimentally measure the e.e. of a mixture?	173
7.7 Enantiomers and biochemistry	173
7.8 Problems	175
Chapter 8. Organic Reaction Basics	179
8.1 Types of Reactions	179
8.2 Nucleophiles/Electrophiles	181
8.3 Finding Nucleophilic Sites	182
8.4 Finding Electrophilic Sites	185
8.5 One arrow or more?	189
8.6 Arrow Review	193
8.7 Reaction conditions	193
8.8 Thermodynamics	194
8.8.1 Bond Dissociation Energy	194

8.8.2 Enthalpy	194
8.8.3 Entropy.....	197
8.9 Kinetics.....	197
8.9.1 A one-step reaction.....	198
8.9.2 Two-step reactions.....	199
8.10 Ions	200
8.11 Reactive Intermediates	200
8.11.1 Carbocations	201
Carbocation stability	202
Through Hyperconjugation	202
Through Resonance.....	204
Through Induction.....	205
8.11.2 Free Radicals	206
Stability of Free Radicals	207
8.11.3 Carbanions	207
Carbanion stability	207
How about Hyperconjugation?	207
How about Resonance?.....	208
How about Induction?.....	208
8.11.4 Carbenes	209
8.12 Problems	210
Chapter 9. Alkyl Halides	213
9.1 Introduction	213
9.2 Nomenclature.....	213
9.2.1 Trivial Names.....	213
9.2.2 IUPAC Nomenclature	214
9.3 Preparation of Alkyl Halides.....	214
9.3.1 Free radical Halogenation	214
Chlorination of Propane	215
Bromination of Propane.....	217
Allylic and Benzylic Radicals	218
9.4 Alkyl halides from alcohols	222
9.5 Reactions of Alkyl Halides	224
9.5.1 Substitutions	224
9.5.2 Eliminations.....	224
9.6 The S _N 2 Reaction- The “backside attack”.....	225
9.7 Factors that affect the S _N 2:	227
9.7.1 Why a backside attack?.....	227
9.7.2 The Substrate	227
9.7.3 The Leaving Group	228
9.7.4 The Solvent.....	228
Polar Protic Solvents	229
Polar Aprotic Solvents	229
9.7.5 The Nucleophile	230
Negative charge helps.....	230
Down a column helps.....	231
Across a row hurts.....	231
Resonance hurts.....	231
Inductive effects.....	232
Sterics hurts.....	232

9.7.6 Stereochemistry - inversions	233
9.7.7 Anionic vs. Neutral nucleophiles	234
9.7.8 Some common nucleophiles	235
9.7.9 S _N 2 Examples	235
9.7.10 Why S _N 2 reactions do not occur on sp ² carbon atoms	236
9.8 The S_N1 Reaction	236
9.8.1 The Substrate	237
9.8.2 The Leaving Group	239
9.8.3 The Nucleophile	239
9.8.4 The solvent	239
9.8.5 The Stereochemistry	240
9.8.6 Rearrangements	241
1,2-Hydride shift	241
1,2-Methyl shift	241
Ring expansion	242
9.9 Beta-Elimination reactions (E1 and E2)	243
9.10 The E1 reaction	244
9.11 The E2 reaction	245
9.11.1 Nucleophiles and Bases	245
9.11.2 E2 Regiochemistry	246
9.11.3 E2 Stereochemistry	248
Stereospecific	249
9.12 Comparison Summary	251
9.13 Reaction Summary	252
9.14 Problems	254
Chapter 10. Alkenes & Alkynes	262
10.1 Introduction	262
10.2 Degrees of Unsaturation	262
10.3 Nomenclature	263
10.3.1 Alkenes and Alkynes	263
10.3.2 Alkenes - Cis/Trans and E/Z	265
10.3.3 The E-Z system	266
10.3.4 Cycloalkenes	269
10.3.5 Bredt's Rule	269
10.4 Stability of Alkenes	270
10.4.1 Cis vs. Trans	270
10.4.2 Saytzeff's Rule	270
10.5 Alkene Synthesis	271
10.5.1 Review	271
E2-Dehydrohalogenation to form alkenes	271
E2-Dehydrohalogenation to form alkynes	271
E1 Formation of Alkenes	272
10.5.2 New Alkene Syntheses	272
Dehalogenation of Vicinal Dibromides	272
Dehydration	273
10.6 Reaction Summary	274
10.7 Problems	275
Chapter 11. Alkene & Alkyne Reactions	278
11.1 Electrophilic attack	278

11.2 Markovnikov hydrohalogenation	278
11.2.1 Of an alkene	278
11.2.2 Of an alkyne	279
11.3 Anti-Markovnikov hydrobromination	281
11.3.1 Of an alkene	281
11.3.2 Of an alkyne	281
11.4 Hydration of alkene	282
11.5 Hydrosulfonation	283
11.6 Triangle reactions	283
11.7 Oxymercuration/Demercuration-with water- A triangle reaction.....	285
11.7.1 Oxymercuration in water	285
11.7.2 Demercuration	286
11.8 Oxymercuration/Demercuration-with alcohol- A triangle reaction	287
11.8.1 Oxymercuration in alcohol.....	287
11.8.2 Demercuration	287
11.9 Markovnikov hydration of alkyne	288
11.10 Hydroboration – Anti-Markovnikov hydration	289
11.10.1 Hydroboration of alkene	289
11.10.2 Hydroboration of alkyne	290
11.11 Halogenation-A triangle reaction	292
11.11.1 Halogenation of alkenes.....	292
11.11.2 Halohydrin formation - A triangle reaction.....	293
11.11.3 Halogenation of alkynes.....	294
11.12 Epoxidation	294
11.13 Anti-hydroxylation-A triangle reaction	295
11.14 Cyclopropanation	296
11.14.1 Alpha eliminationmaking dihalocarbenes.....	296
11.14.2 Diazomethane	297
11.14.3 Simmons-Smith Reaction	298
11.15 Syn-Addition: Giving it the horns	299
11.16 Hydrogenation-Giving it the horns.	299
11.16.1 Of an alkene	299
11.16.2 Of an alkyne	300
Hydrogenation to an alkane.....	300
Hydrogenation to cis-alkene – Giving it the horns.....	300
Hydrogenation to trans-alkene	301
11.17 Syn-hydroxylation.....	302
11.17.1 With OsO ₄	302
11.17.2 With KMnO ₄	303
11.18 KMnO₄ oxidation of alkynes.....	303
11.19 Further oxidation with KMnO₄	304
11.19.1 Of alkenes	304
11.19.2 Of alkynes.....	305
11.20 Ozonolysis	306
11.20.1 Of alkenes	306
11.20.2 Of alkynes.....	307
11.21 Polymers.....	307
11.21.1 Anionic Polymerization	308
11.21.2 Cationic Polymerization	309
11.21.3 Free radical Polymerization.....	310

11.22 Olefin metathesis	311
11.22.1 Ring Closing Metathesis	312
11.22.2 Ring Opening Metathesis Polymerization (ROMP)	313
11.23 Acetylide formation	314
11.24 Reactions of acetylides	315
11.24.1 S_N2 Reaction of Acetylides	315
11.24.2 E2 Reaction of Acetylides	315
11.24.3 Acetylide Attacking a Carbonyl	316
11.24.4 Acetylide Attacking an Epoxide	316
11.24.5 Heavy metal acetylides	317
11.25 Reaction Summary	318
11.25.1 Alkene Reactions	318
11.25.2 Alkyne Reactions	319
11.26 Problems	320
Chapter 12. Nuclear Magnetic Resonance (NMR)	329
12.1 Introduction	329
12.2 The Theory	329
12.2.1 Shielding	330
12.3 The Proton NMR spectrum	332
12.4 How many peaks?	333
12.5 Integration of peaks	334
12.6 Chemical Shifts	335
12.6.1 Deshielding of benzene and alkene protons	335
12.6.2 Deshielding of aldehyde and carboxylic acid protons	336
12.7 Spin-Spin splitting	337
12.7.1 N+1 rule.....	337
12.7.2 Why does spin-spin splitting happen?	338
12.7.3 The pattern for multiplets.....	339
12.7.4 If they couple, they “point” towards each other	340
12.7.5 Coupling constants	341
12.8 OH and NH protons	343
12.9 Carbon NMR	344
12.9.1 Carbon NMR chemical shifts	344
12.9.2 Integrations	345
12.9.3 Off-Resonance Decoupled ^{13}C NMR spectra	346
12.10 DEPT	347
12.11 Solved Problem	348
12.12 Problems	351
Chapter 13. Alcohols	357
13.1 Introduction	357
13.2 Nomenclature	357
13.2.1 IUPAC Names	357
13.2.2 Common names	359
Alkyl alcohols.....	359
Vicinal Diols	359
Phenols.....	360
13.3 Thiols	361
13.3.1 Nomenclature	361
IUPAC	361

Common.....	362
13.3.2 Examples	362
13.3.3 Preparation	362
13.4 Properties of simple alcohols	362
13.4.1 Methanol.....	362
13.4.2 Ethanol	363
13.4.3 Isopropanol	363
13.4.4 Ethylene Glycol & Propylene glycol.....	363
13.4.5 Glycerol	363
13.5 Alcohol Spectroscopy.....	364
13.5.1 IR Spectroscopy	364
13.5.2 Mass Spectrometry	364
13.5.3 ¹ H NMR	364
13.5.4 ¹³ C NMR	365
13.6 Synthesis of alcohols.....	365
13.6.1 Review	365
The S _N 2 reaction of hydroxide with an alkyl halide.....	366
Acid hydration of an alkene	366
Markovnikov Oxymercuration/Demercuration of an alkene in water	366
Anti-markovnikov hydroboration of an alkene	366
Syn-dihydroxylation of an alkene using osmium tetroxide	366
Syn-dihydroxylation of an alkene using potassium permanganate	366
Epoxidation of an alkene followed by acid hydrolysis.....	366
Acetylide attack of an epoxide	367
Acetylide attack of a carbonyl	367
13.7 New Syntheses of alcohols.....	368
13.7.1 More on the nucleophilic attack of carbonyls.....	368
13.7.2 Grignard and Organolithium Reagents	370
Grignard attack of aldehydes and ketones	371
Grignard attack of esters and acid chlorides.....	371
Solvent for the Grignard reagent	373
Reaction of a Grignard with a carboxylic acid.....	373
Grignard reaction with epoxides	374
Grignards with alkyl halides	374
Gilman Reagents with alkyl halides.....	374
13.7.3 Reductions of carbonyl compounds.....	376
Reduction of aldehyde or ketone.....	376
Reduction of acid chloride	377
Reduction of ester or carboxylic acid	378
Raney nickel, H ₂ reductions.....	379
13.8 Reaction Summary.....	380
13.9 Problems	382
Chapter 14. Alcohol Reactions.....	386
14.1 Introduction	386
14.2 Deprotonation of alcohols	386
14.2.1 Synthesis of an alkoxide	386
14.2.2 Why would we want to make an alkoxide?	386
14.3 Hydroxyl, OH, is a poor leaving group	387
14.3.1 Turn OH into H ₂ O	388
14.3.2 Dehydration	388

To form an ether	388
To form an alkene	389
14.3.3 Turning OH into a halide	390
14.3.4 Turning OH into a sulfonate	391
14.3.5 Synthesis of tosylate esters	392
14.3.6 Why turn an OH into a good leaving group?	393
S _N 2	393
E2	393
14.4 Oxidations	394
14.4.1 Oxidizing agents	395
14.5 Reduction of alcohols	397
14.6 Diol reactions	398
14.6.1 Pinacol rearrangement	398
14.6.2 Periodic Acid	398
14.7 Esterifications	399
14.7.1 Fischer Esterification	399
14.7.2 From an acid chloride	399
14.8 Inorganic esters	400
14.8.1 Sulfates	400
14.8.2 Nitrates	400
14.8.3 Phosphates	401
14.9 Thiols	401
14.9.1 Thiol/Disulfide conversion	401
14.10 Reaction Summary	403
14.11 Problems	405
Chapter 15. Ethers, Epoxides, Sulfides	410
15.1 Ethers	410
15.1.1 Crown ethers	411
15.2 Nomenclature	411
15.2.1 Ether Nomenclature	411
IUPAC Nomenclature	411
Common names	411
15.2.2 Epoxide nomenclature	412
15.2.3 Sulfide nomenclature	412
IUPAC	412
Common	413
Sulfide ring	413
15.3 Ether spectroscopy	413
15.3.1 Infrared spectroscopy	413
15.3.2 ¹ H and ¹³ C NMR	414
Mass Spectroscopy	415
15.4 Ether synthesis	415
15.4.1 Williamson Ether Synthesis	415
15.4.2 Alkoxymercuration/Demercuration in alcohol	415
15.4.3 Bimolecular Dehydration	416
15.5 Ether reactions	417
15.5.1 Ether cleavage with HBr, HI	417
15.5.2 HBr and HI with phenyl ethers	418
15.5.3 Beware of Autooxidation!	418
15.6 Sulfides	419

15.6.1 Synthesis	419
15.6.2 Reactivity.....	419
SAM	420
Sulfide oxidation.....	420
15.7 Epoxides	421
15.8 Epoxide Synthesis	421
15.8.1 Epoxidation of an alkene using a peroxyacid	421
15.8.2 Halohydrin reaction with a base	422
15.9 Triangle reactions	422
15.10 Epoxide Reactions.....	424
15.10.1 With HX	424
15.10.2 In acid with water to make glycols.....	424
15.10.3 In acid with alcohols.....	425
15.10.4 With base/Grignards	425
15.11 Reaction summary	426
15.12 Problems	427
Chapter 16. Carbonyl Compounds	431
16.1 Introduction	431
16.2 Spectroscopy	431
16.2.1 Mass Spectrometry	431
16.2.2 Infrared Spectroscopy	432
Carbonyl compounds	432
16.2.3 ^1H and ^{13}C NMR	435
16.3 Nomenclature.....	436
16.3.1 Ketones	436
IUPAC	436
Common.....	436
16.3.2 Aldehydes/Carboxylic acids.....	437
IUPAC	437
Common.....	437
16.3.3 Amides	438
16.3.4 Esters.....	438
16.4 Synthesis of Ketones and Aldehydes - Review	439
16.4.1 Oxidation of alcohols	439
16.4.2 Oxidizing agents	440
16.4.3 Reduction of carboxylic acid	442
With a strong reducing agent to alcohol	443
Stopping at aldehyde	443
16.4.4 Markovnikov Hydration of alkyne.....	444
16.4.5 Hydroboration of alkyne	445
16.4.6 Ozonolysis of alkenes.....	446
16.4.7 Periodic Acid cleavage of glycols.....	446
16.4.8 KMnO_4 oxidation of alkynes.....	447
16.5 Synthesis of Carboxylic Acids- Review	447
16.5.1 Ozonolysis of alkynes	447
16.5.2 Further oxidation of alkenes with KMnO_4	447
16.5.3 Further oxidation of alkynes with KMnO_4	448
16.6 New Syntheses of Ketones and Aldehydes	449
16.6.1 Ketones and Aldehydes from 1,3-Dithiane	449
16.6.2 Ketones from Carboxylic Acids.....	450

16.6.3 Ketones From Nitriles.....	450
16.6.4 Hydrolysis of an Imine (Protonate and "Go to town.").....	451
16.7 New Syntheses of Carboxylic Acids	451
16.7.1 Grignard attack of carbon dioxide.....	451
16.7.2 From a nitrile.....	452
16.7.3 Permanganate oxidation of alkylbenzene.....	452
16.8 Reaction Summary.....	453
16.9 Problems	456
Chapter 17. Carbonyl Reactions	460
17.1 Reactions of Ketones and Aldehydes	460
17.1.1 Ketone + primary amine makes imine	460
17.1.2 Wittig reaction – making alkene	460
17.1.3 Acetals/ketals.....	461
Hydrolysis of acetal	463
Protecting aldehydes with acetals	463
17.2 Reactions of Carboxylic acids and their derivatives	463
17.2.1 Deprotonation.....	463
17.2.2 Fischer esterification	464
17.2.3 Carboxylic acid to acid chloride.....	465
17.2.4 Acid chloride to ester	465
17.2.5 Acid chloride to amide	465
17.2.6 Carboxylic acid with 2 RLi.....	466
17.3 Carbonyl reductions (Review)	466
17.3.1 Reduction of aldehyde or ketone.....	466
17.3.2 Reduction of acid chloride to alcohol.....	467
17.3.3 Reduction of ester or carboxylic acid to alcohol	468
17.3.4 Carboxylic acid reduction to aldehyde.....	469
17.3.5 Raney nickel, H ₂ reductions.....	469
17.4 The nucleophilic attack on carbonyls (Review)	470
17.4.1 Grignard attack of aldehydes and ketones (Review)	471
17.4.2 Grignard attack of esters and acid chlorides (Review).....	472
17.4.3 Reaction of a Grignard with a carboxylic acid (Review)	473
17.5 Reaction Summary.....	474
17.6 Problems	475
Chapter 18. Enolates.....	480
18.1 The Enolate.....	480
18.2 Enolate as nucleophile	480
18.3 Aldol condensation	481
18.3.1 To dehydrate or not	482
18.3.2 Crossed aldol.....	482
18.4 Claisen Condensation.....	484
18.4.2 Dieckmann Condensation- A cyclic Claisen condensation	485
18.4.3 Crossed Claisen condensation.....	485
18.5 Acetoacetic ester synthesis	487
18.6 Malonic ester synthesis	489
18.7 Michael addition.....	490
18.8 Robinson annulation.....	492
18.9 Reaction Summary.....	494
18.10 Problems	495

Chapter 19. Conjugated Alkenes	499
19.1 Color	499
19.1.1 Nature of light	499
19.1.2 Simple Color Theory	500
19.2 MO diagrams	501
19.2.1 Electron waves	501
19.2.2 Sigma and Pi Bond review	503
19.2.3 Rules for Molecular Orbital (MO) diagrams	503
19.2.4 Dihydrogen Molecular Orbital Diagram	504
19.2.5 Dihelium Molecular Orbital Diagram	505
19.3 Conjugation Introduction	506
19.4 1,3-Butadiene	508
19.5 UV-Visible Spectroscopy	512
19.6 Allyl groups	513
19.7 Allyl carbocation, radical, and carbanion	514
19.7.1 Stability of allylic cations	517
19.7.2 Allylic Radicals	518
19.7.3 S _N 2 of allyl bromide	521
19.8 Kinetic vs. Thermodynamic reaction of HBr with 1,3-butadiene	522
19.9 Diels-Alder Reaction	526
19.9.1 Overview	526
19.9.2 s-cis conformation	527
19.9.3 Orbital overlap	527
19.9.4 Syn stereochemistry	528
19.9.5 Endo rule	529
19.9.6 Diels-Alder regiochemistry	530
19.10 Reaction Summary	533
19.11 Problems	534
Chapter 20. Aromatic Compounds	537
20.1 Introduction	537
The unusual stability of benzene	538
20.2 Annulenes	538
20.3 Molecular orbital diagrams of annulenes	539
20.3.1 MO diagram of benzene	539
20.3.2 MO diagram of cyclobutadiene	540
20.3.3 Counting Pi-System electrons	541
20.3.4 Polygon rule	542
20.4 Aromatic, antiaromatic, nonaromatic	543
20.4.1 4N+2, Hückel's rule	543
20.5 Identifying if aromatic, antiaromatic, or nonaromatic	543
20.6 Aromatic or Antiaromatic Reaction Intermediates	544
20.7 Aromatic bases, pyrrole, pyridine or Heterocyclic aromatic rings	546
20.7.1 Basicity of nitrogen aromatics	547
20.8 Monosubstituted Benzene Derivatives	549
20.9 Disubstituted Benzene Derivatives	549
20.9.1 <i>Ortho</i> , <i>Meta</i> , <i>Para</i>	549
20.9.2 Benzene groups as substituents	550
20.10 Polyaromatic hydrocarbons	551
20.11 Allotropes of Carbon	551
20.12 Phenyl spectroscopy	553

20.12.1 Infrared spectroscopy	553
20.12.2 NMR	554
20.12.3 Mass Spectrometry	555
20.13 Problems	556
Chapter 21. Aromatic Compound Reactions	558
21.1 Introduction	558
21.2 Electrophilic Aromatic Substitution	558
21.2.1 Bromination of Benzene	558
21.2.2 Chlorination of Benzene	559
21.2.3 Iodination of Benzene	559
21.2.4 Nitration of Benzene	559
21.2.5 Sulfonation/Desulfonation of Benzene	560
21.3 Activating groups	561
21.3.1 Alkyl groups	561
Activated	561
Ortho/Para Directing	561
Ortho attack	562
Meta attack	562
Para attack	562
21.3.2 Alkoxy and amino groups	563
Ortho attack	563
Meta attack	563
Para attack	564
21.4 Deactivating Groups	565
Ortho attack	566
Meta attack	566
Para attack	566
21.5 Halide Group	567
Summary	568
21.6 Disubstituted benzenes	569
21.7 Friedel-Crafts	571
21.7.1 Friedel-Crafts alkylation	571
Limitations of Friedel-Crafts alkylation	572
21.7.2 Friedel-Crafts acylation	574
21.7.3 Gatterman-Koch formylation	576
21.8 Clemmensen Reduction	577
21.9 Sandmeyer reaction	578
21.9.1 Aniline synthesis to set up the Sandmeyer reaction	578
21.10 Friedel-Crafts on aniline	581
21.11 Nucleophilic Aromatic Substitution	583
21.11.1 Addition-Elimination	583
21.11.2 Benzyne	584
21.12 Gilman Reagents	586
Halide to organolithium	586
Organolithium to Gilman reagent	586
21.13 Addition Reactions	587
21.14 Birch Reduction	588
21.15 Oxidation of alkyl benzenes	590
21.16 Halogenation of side chains	590
21.17 Oxidation of phenols	591

21.18 Reaction Summary	592
21.19 Problems	594
Chapter 22. Amines and Nitriles	599
22.1 Introduction	599
Amino acids, peptides, proteins	600
Porphyrins	601
Sulfanilamide	602
22.2 Nomenclature	602
22.2.1 Amines	602
IUPAC	602
Common names	603
Alkyl amines	603
Aryl amines	603
As a substituent	603
22.2.2 Nitriles	604
IUPAC	604
As a substituent	604
Common names	604
22.3 Spectroscopy	605
22.3.1 IR Spectroscopy	605
NH, NH ₂	605
Nitriles	606
Amides	606
22.3.2 Mass Spectrometry	607
22.3.3 ¹ H NMR Spectroscopy	607
22.3.4 ¹³ C NMR Spectroscopy	608
22.4 Amine basicity	609
22.5 Amine & Nitrile Synthesis	610
22.5.1 S _N 2 Synthesis	610
22.5.2 Reduction of nitriles	611
22.5.3 Reduction of imines	611
22.5.4 Reduction of amides	612
22.5.5 Reduction of nitrobenzene	612
Aniline synthesis to set up the Sandmeyer reaction	612
22.6 Amine & Nitrile Reactions	613
22.6.1 The Sandmeyer Reaction	613
22.6.2 Acid chloride and amine to make amide	614
22.6.3 Carboxylic acid and amine to make amide	615
Linking amino acids to make peptides	616
22.6.4 Ester and amine to make amide	617
22.6.5 Imine Hydrolysis	618
22.6.6 Ketones from Nitriles	618
22.6.7 Hydrolysis of nitrile to carboxylic acid	618
Nitrile synthesis review	619
22.7 Reaction Summary	620
22.8 Problems	621
Answers to Exercises	624
